Letter from the President

I hope you find the new surveying.com site to be informative and user-friendly. Our updated website is just one of many recent changes at Tri-Tech Surveying Company, L.P. As a growing professional land surveying company, we are making investments in our future that are already yielding valuable results for our employees and clients.

In April, we relocated to our new headquarters office at Beltway 8 and Westpark Drive in southwest Houston. The new building includes a training room equipped with desktops, several conference rooms, increased filing space, over 50 work stations with desktops and dual flat screen monitors, and a secure server room. Thanks to dedicated Tri-Tech employees, we enjoyed a smooth transition to the new space with minimal impact on operations. Within the next several weeks, we will begin drafting classes as well as field crew training programs. This will allow Tri-Tech to continue to lead the profession in providing accurate land surveying services. We are currently running 15 field survey crews 6 days a week and employing over 100 people in the Houston office alone.

Tri-Tech is currently expanding our existing operation in Kerrville to service additional clients in San Antonio and Austin. It is our goal to open a fourth operation in the San Marcos area to better serve our Hill Country clients. Our Kerrville operation is experiencing steady growth. We are currently recruiting additional personnel to accommodate the anticipated increased workload.

Our DFW operation will have been operating for two years as of this July. We are currently running two field crews with plans of adding one additional crew, one administrator, and at least one or two more drafting personnel. We are also going to be adding some additional builder work to the DFW office.

There is more exciting news on the horizon, including a value-added surveying and engineering services package that Tri-Tech and Cable Lock Foundation Constructors are offering to homebuilders. Read all about this joint promotion, which includes an optional 10-year warranty on foundation and drainage backed by Cable Lock, in our forthcoming company newsletter.

Striving for Perfection,

Larry B. Hoffman
President
